|                              |  |                |  |
|------------------------------|--|----------------|--|
| Full Name:                   |  | ID Number:     |  |
| Contact numbers: (@least 2X) |  | Email address: |  |

1. Basically the client wants to get notifications from the taxi system on the expiry dates of the 3 types of licences. They will capture the information into the system and then the system must be able to keep records and notify via **email and sms** when the licence is about to expiry.
2. We must add a search tool, for the owners or the association clerks to be able to search for vehicle & driver's details. Search by: Owner's Name, Vehicle registration number, Driver's Name.
3. When a USER first time registers, they will get the login details from the system administrator via email. A registration notification must come to us (system administrators) for us to create login details for the new USER.

4. We need to change the login page in terms of design. We must add the pictures of vehicles on the login screen. We need to add the Heading "LICENCING SOLUTION"
